Invitation to the Special Section on

ENGINEERING EDUCATION

Rapidly evolving technology places pressure on engineering education to continuously update. Engineers underpin technological development and its dissemination. An engineering education system should incorporate aspects of natural resource management, changing technology and the environment in its curriculum. Where Government, Industry and University have collaborated on work integrated learning programs developing of high quality engineering graduates has been demonstrated. The aim of this special session is to attract all workers in this field to a fruitful interchange of experiences and discussion.

Topics of interest include, but are not limited to:

- Innovation in engineering and technology education
- Problem/Project/Design based learning
- Multimedia applications in engineering and technology education
- Distance education and open learning
- Work integrated learning program
- Assessment and its role in engineering learning
- Engineering education case studies
- Benchmarking against international programs

Authors' Schedule:

Authors should contact the Special Session Organizers as soon as possible and consider schedule presented at ICIT'2009 website.

Submission of Papers:

Papers are to be submitted electronically. For further details please consult the conference web pages.

Session Organizers:

Ratikanta Sahoo, CQUniversity, AUSTRALIA, (r.sahoo@cqu.edu.au)
